Interchar_® 1120

PRODUCT DESCRIPTION	A single component, borate and chlorine free, water borne intumescent coating designed for on-sit application to interior exposed structural steel requiring protection from cellulosic fire. Interchar 1120 is a low VOC intumescent material independently fire tested for up to 3 hour fire ratings in accordance with ASTM E119/UL263, BS 476 20-22, EN 13381-8 and GB 14907.					
	Interchar 1120 is a CE	marked product	with European Tec	chnical Approval E	TA-11/0045.	
INTENDED USES	To provide cellulosic fire protection on beams, columns and hollow sections in interior environments.					
PRACTICAL INFORMATION FOR INTERCHAR 1120	Colour	White				
	Gloss Level	Matt				
	Volume Solids	$68\% \pm 3\%~$ (measured according to ISO 3233 and BCF Guidance Method)				
	Typical Thickness	300-700 microns (12-28 mils) dry equivalent to 441-1029 microns (17.6-41.2 mils) wet Required film thickness is dependent upon fire rating				
	Theoretical Coverage	0.97 m²/litre at 700 microns d.f.t and stated volume solids 39 sq.ft/US gallon at 28 mils d.f.t and stated volume solids				
	Practical Coverage	Allow appropriate loss factors				
	Method of Application	Airless Spray, Brush, Roller				
	Drying Time					
				Overcoating i	nterval with self	
	Temperature	Touch Dry	Hard Dry	Minimum	Maximum	
	10°C (50°F)	5 hours	6 hours	16 hours	Extended ¹	
	15°C (59°F)	4 hours	5 hours	12 hours	Extended ¹	
	25°C (77°F)	2 hours	4 hours	6 hours	Extended ¹	
	40°C (104°F)	1 hour	3 hours	3 hours	Extended ¹	

All drying time data has been quoted at the typical thickness of 700 microns (28 mils) d.f.t. and assuming good air flow.

Minimum overcoating interval of Interchar 1120 with topcoats is 24 hours. Further details on minimum overcoating times are contained in the Application Guidelines.

REGULATORY DATA	Flash Point (Typical)	>101°C (214°F)	
	Product Weight	1.4 kg/l (11.7 lb/gal)	
	VOC	0.16 lb/gal (20 g/lt) 0 g/kg	EPA Method 24 EU Solvent Emissions Directive (Council Directive 2010/75/EU)

See Product Characteristics section for further details

AkzoNobel

Interchar_® 1120

Water Borne Intumescent Coating

SURFACE
PREPARATIONAll surfaces to be coated should be clean, dry and free from contamination. Prior to paint
application, all steel surfaces should be assessed and treated in accordance with ISO 8504:2000.

Oil or grease should be removed in accordance with SSPC-SP1 Solvent Cleaning.

Primed Steelwork

Interchar 1120 should always be applied over a recommended anti-corrosive coating scheme. The primer surface should be dry and free from all contamination and Interchar 1120 must be applied within the overcoating intervals specified (consult the Interchar 1120 Application Guidelines).

Areas of breakdown, damage etc., should be prepared to the specified standard (e.g. Sa2¹/₂ (ISO 8501-1:2007) or SSPC-SP6, Abrasive Blasting, or SSPC-SP11, Power Tool Cleaning) and a full coat of primer applied prior to overcoating with Interchar 1120.

Metallic Zinc Primed Surfaces

Interchar 1120 can be applied over approved epoxy metallic zinc primers, provided that these have been overcoated with an approved tie coat. Ensure that the primed surface is clean, dry and free from contamination prior to application of the Interchar 1120. Recommended tie coats are Intergard 269 or Intergard 276.

APPLICATION	Mixing	This material is a one component coating and should always be mixed thoroughly with a power agitator before application. Not applicable	
	Mix Ratio		
	Airless Spray	Recommended	Tip Range 0.43-0.53 mm (17-21 thou) Total output fluid pressure at spray tip not less than 175 kg/cm² (2489 p.s.i.)
	Air Spray (Pressure Pot)	Not recommended	
	Air Spray (Conventional)	Not suitable	
	Brush	Suitable	Recommended for small areas and repairs, multiple coats will be necessary to achieve the required dry film thickness.
	Roller	Suitable - Small areas	Typically 100-300 microns (4.0-12.0 mils) can be achieved
	Thinner	Not normally required.	
	Cleaner	Clean Water	
	Work Stoppages	 Do not allow material to remain in hoses, guns or spray equipment. Thoroughly flush all equipment with clean water. <i>Do not use organic solvents.</i> All unused material should be stored in tightly closed containers. Partially filled containers may show surface skinning after storage. Clean all equipment immediately after use with clean water. It is good working practice to periodically flush out spray equipment during the course of the working day. Frequency of cleaning will depend upon amount sprayed, temperature and elapsed time, including any delays. All surplus materials and empty containers should be disposed of in accordance with appropriate regional regulations/legislation. 	
	Clean Up		

Intercha Water Borne Intu	$\mathbf{r}_{\mathbb{R}}$ 1120		X Internationa		
PRODUCT CHARACTERISTICS	The detailed Interchar 1120 Application Guidelines should be consulted prior to use.				
	Interchar 1120 is approved to a wide range of international standards; please contact International Protective Coatings for advice on fire resistance limits and certification.				
	Where approval to UL263 is required, product reference HFA122 should be requested.				
	Interchar 1120 must be protected from freezing at all times during storage and transport. For optimum application and drying characteristics, the air and substrate temperature should be greater than 10°C (50°F) and relative humidity less than 85%. Good air flow and ventilation should be maintained to improve drying and recoat properties and speed up the application. Application at temperatures below 10°C (50°F) will retard drying and extend overcoatings intervals, as will higher humidities.				
	Discard frozen Interchar 1120 in accordance with local disposal regulations. Do not thaw frozen material and apply.				
	Surface temperature must always be a minimum of 3°C (5°F) above dew point. In line with good painting practice, application should not take place in conditions which are deteriorating, e.g. the temperature is falling or there is a risk of condensation forming.				
	Maximum film build in one coat is best attained by airless spray. When applying by methods other than airless spray, the required film build is unlikely to be achieved.				
	Care must be taken not to over-apply on areas such as internal angles, corners, edges, etc.				
	The finished appearance of Interchar 1120 is dependent on application method. For visible areas spray application is preferred, which can provide a smooth finish. Higher decorative finishes may require additional preparation before application of topcoats; please see Application Guidelines for further information. Sealer coats are not necessary in environments which are classed as ISO 12944-2 C1.				
	Interchar 1120 is approved for interior exposure environments classified in accordance with ISO 12944. Consult International Paint for the appropriate primer and topcoat systems for the specified interior environment.				
	Interchar 1120 is UL listed for use in Conditioned Interior Space and Interior General Purpose conditions without a topcoat.				
	Interchar 1120 (whether se	aled or not) should be pro	tected from pooling or running water.		
	Interchar 1120 is not designed for frequent water immersion/soaking.				
	Note: VOC values are typical and are provided for guidance purpose only. These may be subject to variation depending on factors such as differences in colour and normal manufacturing tolerances.				
SYSTEMS COMPATIBILITY	The following primers are approved for use with Interchar 1120:				
	Intercure 200 Intercure 200HS	Intergard 251HS Intergard 2509 Intergard 269 InterH2O 499	Interlac 573 Interprime 306 Interseal 670HS Interseal 1052		
	Interchar 1120 may also be applied over Interzinc 52 providing a suitable tie coat is also used; please see Surface Preparation section.				
	The following topcoats are approved for use with Interchar 1120				

Intercryl 525 Interthane 870 Interthane 990SG Intersheen 579 Interthane 990

There is a wider range of primers and topcoats which may be suitable for use with Interchar 1120; please contact International Protective Coatings for further information and assistance.

Water Borne Intumescent Coating

ADDITIONAL INFORMATION	Further information regarding industry standards, terms and abbreviations used in this data sheet can be found in the following documents available at www.international-pc.com:		
	Definitions & Abbr	reviations	
	Surface Preparation	on	
	 Paint Application Theoretical & Practical Coverage Interchar single pack water borne intumescent coatings application guidelines 		
	Individual copies of these information sections are available upon request.		
SAFETY PRECAUTIONS	accordance with the advice g	se only by professional applicators in industrial situations in iven on this sheet, the Safety Data Sheet and the container(s), and afference to the Safety Data Sheet (SDS).	
	All work involving the application and use of this product should be performed in compliance w relevant national, Health, Safety & Environmental standards and regulations. In the event welding or flame cutting is performed on metal coated with this product, dust and fumes will be emitted which will require the use of appropriate personal protective equipment a adequate local exhaust ventilation.		
	If in doubt regarding the suita	bility of use of this product, consult AkzoNobel for further advice.	
PACK SIZE	Unit Size	Vol Pack	
	20 litre	20 litre 20 litre	
	5 US gal 5	US gal 5 US gal
