

Easy at sea

All legally required annual fire safety inspections conducted and documented at the same time

Firesafe Easy at sea

Mapping of the current situation

You get a simple and non-binding survey of existing control agreements. We guarantee a price match. If you choose Firesafe, we are happy to assist with the transfer of existing agreements.

One team

One team from Firesafe performs all periodic checks with joint start-up. Competent and service-minded technicians ensure minimal operational disruption for shipowners, shipyards, personnel and passengers. If desired on board the ship while it is in operation. Our mobile equipment let us do it anywhere in the world.

One documentation

All documentation for the authorities and the Norwegian Maritime Directorate can be delivered complete in one package, always fully completed and acknowledged as completed. You also get a compiled report, where deviations are presented with solution prices. You get all the work together in one invoice.

Gain control, save time and costs

EASY AT SEA is a comprehensive agreement where all statutory checks can be carried out without interruption in operations. This makes everyday life easier for everyone responsible for safety on board ships and boats, including shipowners, shipyards and personnel.

A ship has several different firefighting installations and other related safety systems. When several suppliers take periodic checks at different times of the year, it means piecemeal and shared documentation, several times and invoices to deal with. Often with interruptions in operation. If, for example, the alarms are checked in January and the sprinklers in March, someone checks and documents that the systems actually talk to each other in the meantime?

ONE CONTACT PERSON We promise you a simpler everyday life with one contact person for all questions within fire protection and safety in general.

WE ARE WHERE YOU ARE Firesafe has over 30 departments in Norway, Sweden, Denmark and Finland – most of it is located along the coast. With a mobile service workshop, we can, among other things, carry out recertification of fire extinguishers on board the ship or on the yard – according to the customer's wishes.

SUMMARY Easy at sea means that the periodic check on all installations is carried out at the same time, you get one invoice and one report. You get full control and save both time and costs.

Contact us for an appointment.

Periodic checks which are available

- / Gas measurement equipment
- / Compressor test
- / Water mist
